

What's in a Name?

Before you were born, your parents spent hours trying to decide just the right name for you. People also spend time giving animals specific names for their young and for the groups the animal families form. For example, a young wolf is called a "pup" and a group of wolves is called a "pack." So, take a gander at this gaggle of goofy names and see how many you can match correctly. Draw a line connecting each animal's name to the names of its young and its group.

Animal

crocodile

frog

lion

seal

bear

chimpanzee

fish

kangaroo

flamingo

elephant

Young

cub

calf

chick

fry

hatchling

joey

tadpole

pup
